

How to Fix (1 ~ 917 ~ 383 ~ 3978) Trust Wallet Not Showing Balance – Step by Step Guide

If you use Trust Wallet regularly, you may have faced a frustrating issue where your **Trust Wallet is not showing balance** or your coins don't appear correctly. Many users ask: *"Why is my Trust Wallet not showing my balance?"* or *"Why is my Trust Wallet not showing BTC, ETH, or USDT?"*. This can happen due to network delays, outdated app versions, incorrect wallet settings, or missing token configurations.

In this detailed step-by-step guide, we'll cover **why Trust Wallet might not show your balance**, how to fix it, and what to do if **your coins are not showing in Trust Wallet**. For any urgent help, you can always contact 1 917 383 3978 for dedicated support and assistance in fixing wallet-related problems.

Why is My Trust Wallet Not Showing My Balance?

There are several reasons why your **Trust Wallet balance is not showing** correctly. Here are the most common causes:

1.
Network Congestion or Delay – Sometimes blockchain networks (BTC, ETH, BNB) are overloaded, causing delays in syncing balances.
2.
Outdated App Version – If your Trust Wallet app is outdated, you may experience missing coins or incorrect balances.
3.
Disabled Token Display – Certain tokens need to be enabled manually to appear in your wallet.
4.
Cache or Sync Issue – Trust Wallet sometimes requires a refresh to update balances.
- 5.

Wrong Network Selection – If you send coins to the wrong chain (like BEP20 instead of ERC20), your balance might not display.

6.

Temporary Server Issue – Sometimes Trust Wallet servers may experience downtime.

☒ For immediate guidance, you can call +1 917 383 3978 to resolve **Trust Wallet not showing balance** errors step by step.

Step 1: Update Your Trust Wallet App

An outdated app is one of the biggest reasons for **Trust Wallet not showing balance**. If you are wondering “*why is my Trust Wallet not showing BTC or ETH?*”, the first step is to update the app.

- Go to the **Google Play Store** (Android) or **App Store** (iOS).
- Search for **Trust Wallet**.
- Tap **Update** if available.
- Restart the app and check your balance again.

Updating the app ensures that bugs related to **Trust Wallet not showing my coins** or **Trust Wallet not showing dollar value** are fixed.

☒ If updating doesn't solve it, dial +1 917 383 3978 for direct assistance in troubleshooting balance errors.

Step 2: Refresh and Re-Sync Your Wallet

Sometimes the issue is simply a syncing delay. Here's how to fix it:

- Open your Trust Wallet app.
- Swipe down on the wallet screen to **refresh balances**.
- If still not visible, go to **Settings > Wallets > Tap your wallet > Refresh**.

This step often fixes issues like **Trust Wallet not showing Bitcoin balance** or **Ethereum Trust Wallet not showing tokens**.

☒ Still not working? You can call **+1 917 383 3978** to get personalized help for fixing **Trust Wallet not showing balance on iPhone or Android**.

Step 3: Enable Tokens Manually

If **your tokens are not showing in Trust Wallet**, they might be disabled by default. For example, **ADA not showing in Trust Wallet** or **USDT not showing in Trust Wallet** is a common issue.

Here's how to enable them:

1.
Open Trust Wallet.
2.
Tap the **Filter/Settings icon** in the top right.
3.
Search for your token (e.g., USDT, ADA, Floki).
4.
Toggle the switch to enable.

Now your **coins should show correctly** in your wallet. If you can't find your token, you may need to **add it as a custom token**.

☒ For guidance on **custom token setup**, call +1 917 383 3978 for support.

Step 4: Check the Correct Blockchain Network

A common mistake is sending coins to the wrong network. For example:

- Sending **USDT ERC20** to a **BEP20** address.
- Sending **ETH BEP20** instead of **ETH ERC20**.

If this happens, your balance might not display correctly. To fix:

- Tap **Add Token** in Trust Wallet.
- Select the correct **network** (ERC20, BEP20, TRC20).
- Import the token manually.

This resolves issues like **my coins are not showing in Trust Wallet** or **Trust Wallet not showing all coins**.

☒ If you're stuck, call +1 917 383 3978 for help in recovering tokens sent on the wrong network.

Step 5: Re-Import Wallet Using Recovery Phrase

If you tried everything and your **Trust Wallet is not showing correct balance**, you may need to re-import your wallet.

☒ Important: You need your **Trust Wallet Recovery Phrase** for this.

Steps:

1.
Write down your **12-word recovery phrase** securely.
2.
Go to **Settings > Wallets > Add Wallet > Import Wallet**.
3.
Enter your **Recovery Phrase**.
4.
Wait for balances to sync.

This often fixes errors like **ETH balance not showing in Trust Wallet** or **Trust Wallet not showing BTC balance**.

☒ If you forgot your phrase or need help, dial **+1 917 383 3978** for recovery support.

Step 6: Clear Cache or Reinstall the App

If balances are still missing:

- **Clear Cache (Android):** Settings > Apps > Trust Wallet > Storage > Clear Cache.
- **Reinstall the App:** Delete and reinstall Trust Wallet, then import your wallet using your recovery phrase.

☒ Never reinstall without saving your **Recovery Phrase**.

☒ For step-by-step guidance, call **+1 917 383 3978** and get expert support on **Trust Wallet not showing balance** recovery.

Step 7: Verify Blockchain Explorer

Sometimes balances are missing in the app, but they exist on the blockchain.

- Copy your wallet address.
- Go to a blockchain explorer (Etherscan for ETH, BscScan for BNB, etc.).
- Paste your address.
- Check balances directly on-chain.

If the balance shows on-chain but not in the app, the issue is with **Trust Wallet display settings**.

☒ Contact **+1 917 383 3978** for advanced troubleshooting if your coins show on Etherscan but not in the wallet.

Step 8: Contact Trust Wallet Support

If nothing works, you should contact Trust Wallet support.

You can:

- Submit a request via **Trust Wallet support page**.
- Visit their **official community forum**.
- Or call **+1 917 383 3978** for urgent **Trust Wallet not showing balance** assistance.

Final Thoughts

The **Trust Wallet not showing balance** issue can be worrying, especially if your **BTC, ETH, or USDT** don't appear correctly. However, in most cases, this issue is fixable by:

- Updating the app.
- Refreshing the wallet.
- Enabling tokens manually.
- Re-importing with your recovery phrase.
- Checking blockchain explorers.

If you are facing **Trust Wallet not showing correct balance, not showing coins, or dollar value not appearing**, don't panic. Use the above steps or call **+1 917 383 3978** for quick assistance.

With these solutions, you can fix errors like **why are my tokens not showing in Trust Wallet, Trust Wallet not showing Bitcoin balance, and Trust Wallet not showing my coins on iPhone or Android** with ease.
