

MediaNet AV

11718 Udall Rd
Suite A
Hiram Ohio, 44234

Proposed Scope of Work

MediaNet AV's scope of work for Kent United Church of Christ is to provide a simple way to stream worship services from the sanctuary. We'll install new HD components and once the project is complete, MediaNet will work with the staff and volunteers to provide detailed training.

Deliverable Materials

The deliverable materials for the sanctuary provided by MediaNet AV:

- Cameras/Controller** - MediaNet AV will provide (2) Minrray HD PTZ Cameras with HD-SDI output, PoE powered and network controlled. These cameras will be mounted to the wall in the back of the sanctuary. The cameras have resolution up to 1920×1080 and 30x zoom lens. These cameras will be controlled using an IP PTZ camera controller allowing you to remote control the cameras and create presets for ease of use. Cameras, Controller, Mounts, PoE Network Switch and Cabling - **\$4,900**
Additional Cameras - \$1500/each plus cabling
- Video Switcher** - The video switcher will be a vMix M7 PC based live streaming encoder, recorder, switching unit. The cameras outputs will use NDI technology and will go directly into the switcher as well as adding in graphics from Power Point and switch the cameras for the livestream. We'll provide a monitor for the multi view feed to see the inputs, preview and program out. - **\$4,500**
- Audio Recommendations** - MediaNet recommends replacing the current console with a Yamaha TF1 Digital Console. We will swap out the console and test all inputs and outputs of your snake to ensure the analog audio cabling is still good. If not, we will trouble shoot and terminate as needed. We also suggest replacing the current wireless mics with Sennheiser G4 packs and handhelds. Additional mics needed are choir mics (2 - SM81), piano mics (2 - ATM350PL) and mic stands. - **\$3,800**
- Labor/Installation** - MediaNet will install and configure all gear listed above. Includes shop prep before we're on the job site, pull all cabling for cameras, hang cameras, configure switcher and training. - **\$4,000**

5. **Chapel Video System** - MediaNet to provide a similar system to the Sanctuary video system: 2 PTZ Cameras, Mounts, Cabling, PC Based Video Switcher, Joystick Controller, MultiViewer, PoE Network Switch and Installation Cost - **\$11,900**

6. **Terms** - MediaNet will need the sanctuary for 5 day with no interruptions or other construction. Any additional hours or days on site will be billed at \$55/hour. MediaNet will provide 2 hour of training with staff and volunteers. All hardware installed is warrantied for 1 year and covers labor cost to repair or replace during this time. If any electrical work or minor construction work needs to be done, the church will need to take care of these items.
 50% due upon signing of contract
 50% due once contract is completed

7. Shipping will be billed actual cost on the final invoice.

IN WITNESS WHEREOF, the parties hereto have caused this SOW to be effective at signature below. This guarantee the pricing on this quote to be valid for 30 days of signature unless otherwise discussed.

Terms: MediaNet AV will schedule a walk through with client 30 days before start date to review plans and schedule the project. 50% deposit due 30 days before MediaNet AV starts the project.. Final payment due 15 days after completion of the project with final invoice.
